

## SMSC - Computing

### Spiritual

At King's Primary School, we believe that through the study of computing, we can nurture the spiritual development of our pupils. Computing provides opportunities for reflection of awe and wonder about the achievements in computing today and the possibilities for the future.

Computing lets students have the opportunity to reflect on how computers can sometimes perform better in certain activities than people.

To promote students' spiritual development, their sense of self and their will to achieve, we continually takes the opportunity to praise students for their contribution in lessons.

### Moral

Computing supports moral development by looking at how ICT developments have had an impact on society as technology has meant that old ways of working have been changed to help the society.

### Social

Computing supports social development by the completion of group work within lessons as well as practical tasks. Children are required to understand about social media and the advantages these sites have brought as well as the numerous problems such as cyber bullying.

### Cultural

The development in technology has impacted different cultures and backgrounds in different ways. More developed countries are able to keep pace with the developments in technology whilst less developed ones can't.
